

TIME TRAVEL

is it possible?

Gary Margrove

The Future is Now

Scientists tell us there are an infinite number of possible futures. Individually we select (at every moment) the next step in our future. This is based on the decision we made at each given moment in time. For example, I remain at home instead of attending a friend's party. At the party is one possible future spouse. As I did not attend the party I shall never meet this person. The marriage to this person does not take place for me in this time line.

What if I had attended the party? Perhaps I don't feel confident enough to talk to this fascinating person. Once again the marriage to this person does not take place. Another 'me' does strike up a conversation and within a few years we are married.

This of course raises some important points

- How do I know which decisions are the correct ones?
- What should I look out for to guarantee a perfect future?
- Could it be possible to peek into my future so I know which decision is correct?

In a linear timeline there is only one past and future history. In a branching 'many worlds style multiverse' all possible timelines already exist. It has been proven mathematically that all versions of you experience all that they could possibly. Individual versions of you experience a subset of all possibilities. Further questions arise

- Am I able to connect with any of the other me?
- Given an infinite amount of time do I experience all there is to experience?
- Is it possible I could be all there is to be?

The latter question is perhaps the most important. For today scientists are finally agreeing with the Ascended Masters. We are all drops in the Ocean of Consciousness and therefore we are the Ocean of Consciousness. We are all One. This is known as the Unified Field Theory and places each of us in a position of ultimate power (if only we knew it).

In other books I expound on this fact. Please read them.

What if you could travel to the future?

Everybody dreams of a future that is blissful, without war and without work.

The ideal future for those who are sane is a peaceful world. Individuality would be celebrated. Skills would be honed and talents encouraged. There would be no currency of any kind, rather a fair barter system established between neighbours and perhaps distant countries. Everybody would be fed and clothed using nanotechnology.

This same nanotechnology would enable robots to automatically

create new dwellings, transportation systems and fantastic cities even in our skies. The ideal construct would be 'rule' by benign computer that automatically tends to the needs of every individual on the planet. Therefore greed and selfishness would be unnecessary as we would have everything we desire. Do you think this possible?

Perhaps some have peeked into our future by travelling through stargates, some constructed many hundreds of thousands of years ago, some in the present.

When the Large Hadron Collider at CERN is fully operational it shall be our biggest time machine. We are all time travellers in the sense that each moment is a step into the future. Yet this miles long underground complex will physically transport humans and goods into the future and possibly into the past.

Time of course is linear (travels in a straight line) so we progress from a point that becomes our past towards our future which manifests as the present at every moment. However scientists have proven that time as we know it does not exist.

In the twenty first century we still measure time using clocks. The most accurate clock is the atomic clock. Despite increased accuracy it is impossible to capture time precisely for time is different at each different locale. Take as an example the International Date Line. On one side it is yesterday on the other tomorrow.

Time is not the same throughout the Universe and in fact time does not even move at a uniform rate. The faster an object is moving the slower time passes for that object. Upon approaching the speed of light an object may literally be travelling backwards in time. If it was possible to travel at greater than the speed of light we will

have perfected time travel.

Astronauts have all experienced this effect. Upon their return to Earth they all aged more slowly than those of us who remain on our planet. Furthermore scientists have now proven that we do not live merely in three dimensions but in four – we call spacetime.

Spacetime is not linear but may be bent by the effect of gravitational force, especially that of the mysterious black holes. It is in the depths of a black hole that we shall discover just how to travel in time.

In the diagram below we see that the gravitational force of our planet creates a distortion in the spacetime field. We live with this

distortion observing this bending of light but viewing it as being normal. The light from the Sun takes eight minutes to travel to the Earth so the Sun we see is eight minutes younger than the actual Sun. Similarly there are stars that have ceased to exist but the light from those stars takes so long to reach our planet we are still receiving an impression of living stars. In effect we have travelled back in time to when the stars existed.

Imagine we were able to fold spacetime upon itself, essentially placing two points (normally millions of miles or perhaps thousands of light years away from each other) together (this is easily demonstrated by folding two diagonally opposite edges of a piece of paper together). Instead of taking many light years to travel from one point to the other travel would be theoretically instantaneous. In fact mathematics proves that it is possible to

return to a point BEFORE leaving that locale. This is termed a time loop and scientists agree it is fundamentally not only possible but occurs in certain types of black holes.

Technically it is possible to travel through time by entering a black hole then exiting through the other side. Some 'alien' spacecraft appear to do just this (read my UFO Chronicles). In the diagram below a specific type of black hole is created and maintained.

Without bending spacetime travel from point A to point B will take an inordinate amount of time. By folding spacetime (like the aforementioned paper) the journey will be infinitely shorter, perhaps instantaneous. Mathematically this is provable. The Large Hadron Collider in Geneva has already demonstrated the existence of the Higgs particle. Why then have scientists received permission to build an even bigger LHC around Geneva? Just what do they hope to achieve by sending subatomic particles at even greater

speed over a greater distance? Accept that our scientists now believe in the prospect of travel through time. Are they about to open Pandora's Box?

In all previous writings (What Our Governments Don't Want Us To Know, UFO Chronicles, Aliens Are Our Friends etc – please read them all) I have diligently researched and seriously presented my findings. Naturally there is a problem with presenting Time Travel as a serious subject but what if time travel is a reality, a reality we have chosen to deny? Just like angels and invisibility Time Travel could not possibly exist, could it?

The content of this treatise is currently unbelievable. I have no problem with you discrediting everything written here. It is too fantastic for our minds to comprehend. So was the idea of travelling at speeds greater than 30 mph to people of the eighteenth century.

It would never be possible to fly though the people of the nineteenth century. Instant communication to another individual at the other side of the planet can never be achieved though the people of the twentieth century.

Before embarking upon the most fantastic information I have ever unearthed (I have written books on the ANUNNAKI, UFOs, NWO, FEMA camps, DUMBS and much more) I must begin by confessing that I also had no belief that time travel was possible – as a child I just hoped it might be:

Funding for the Hadron Collider near Geneva promises to top a trillion dollars. Not content with chasing an invisible particle scientists have been given the green light to build an even larger LHC:

The truth is hiding in plain sight. Scientists, militarists and western Governments cannot control their excitement as they approach the creation of the first modern stargate. Using a miniature controlled black hole (look out Geneva) the aim is to open a portal to another

place in the Universe – and anytime in the Universe. The proposal is to be able to travel anywhere in spacetime. Spacetime is the four dimensions we exist in (or the acknowledged dimensions). Just as a fish perceives no existence outside its watery environment or a two dimensional being fails to comprehend a third dimension humans cannot conceive of more than four. Yet scientists have proven that there are at least ten dimensions.

The LHC was constructed to race a sub molecular particle to speeds approaching light speed. Time itself is not the same throughout the Universe. Time passes more slowly the faster the speed of a body. Scientists know that travel at the speed of light is impossible (so they believe at present) but travelling at speeds approaching the speed of light essentially slow time down.

Astronauts aged more slowly than those of us left behind on planet Earth.

Technically a party sent into outer space travelling at near light

speed for one year would encounter an Earth more than fifty years into the future upon its return, this of course is time travel.

Travelling through time has fascinated scientists since Albert Einstein proposed the concept early in the twentieth century. A good deal to ingest. There is lots more to follow. First let us have a little fun. Be aware that some of the you tube videos I ask you to watch simply vanish or fail to open, some are credible hoaxes but good fun. Keep an open mind, enjoy the following before we return to the serious business of time travelling.

Featured in you tube videos a character by the name of James Kitchum claims to have met not only Wyatt Earp but also Einstein, the Kennedys and the Beatles as well as discovering gold in California. Yet he is still alive to work in Hollywood in 2013. During all these times he appears to be somewhere in his early twenties.

Many of the sites I visited regarding James have vanished and others are

impossible to access though still present in the search for James Kitchum. If these videos are a hoax and James a non-existent person why is the NSA blocking site access and interfering with the video feed? Is he one of their time travellers? More likely the video film is a beautiful hoax.

So of course it is possible to falsify video information. Now let's examine some beliefs that may substantiate the reality of Time Travel.

Nazi stargate at the South Pole

Towards the end of the second world war the Nazis were launching V1 and a limited number of V2 rockets at the capital city of England. In four years their technology had improved a hundredfold. Were they receiving alien help? Many believe so and there are documents and photographs to substantiate this belief.

Of course the photograph above is faked but are the photos
below?

Photographs of Nazi generals overseeing test flights of UFOs.

Whatever next?

Operation High Jump

Whilst Operation Paperclip (the need to move top German scientists by the hundred to the USA before the Russians claimed them) was vitally important it became of secondary importance to Operation High Jump. In 1946 an American fleet led by Admiral

Byrd was despatched to Antarctica. On the 24th September the aircraft carrier Currituck began launching aircraft on reconnaissance missions. What were they looking for in the frozen wastes of the South Pole?

After the Second World War ended German scientists working on antigravity propulsion (some blueprints featured below) reported to their American bosses that Hitler had established a base at New Swabia, Antarctica. Please watch videos on you tube that list strange structures seen from Google Earth. You will notice in Antarctica large metal 'caps' hundreds of metres in diameter shielding entrances to underground developments. It was in these underground developments that the same scientists had stated that the Nazis may have developed a means to travel through time. The American hierarchy was justifiably petrified.

MITTELSCHWERER SCHWERFLIEGER FLUGZEUGTYP, TYP „MITTELSCHWERER II“

Durchmesser: 26,7 Meter
 Antrieb: „Joule“-Generator 7a (Gesamtlänge 2 76.-Schritte: 23,7 Meter)
 Steuerung: Magn.-feld-Steuerung 8a
 Geschwindigkeit: 6000 Kilometer p-Stunde (eventuell bis ca. 21000 möglich)
 Reichweite im Flugzustand: ca. 50 Stunden
 Steuerung: 0 0 oder KIE in zwei Drehkräften, oder, wie II in einem Treiber
 Aufspannung: Dreieckst.-Nichtal.
 Besatzung: 9 Mann (erg. Transportvermögen bis ca. 20 Mann)
 Wellenleistung: 100 W
 Stillstandsleistung: 15 Kilowatt
 allgemeines Flugverhalten: Tag und Nacht, Wetterunabhängig
 Gesamtlänge: 23,7 Meter (Gesamtlänge 2 76.-Schritte: 23,7 Meter)

The American fleet had to retreat due to bombardment from saucer-shaped craft that flew at incredible speeds. American aircraft were shot down and a destroyer sunk. In return the American fleet had captured a Nazi U-Boat, in Antarctica. The Americans retreated. Later in New York the leader of the expedition Admiral Byrd intimated that America should prepare

for terrible reprisals. He stated that the technology found in the air over the Antarctic was far superior to that of the U.S. Military

At the end of the Second World War many u-boats and hundreds

of scientists were unaccounted for. Some of these began to reemerge after the war in Argentina but the whereabouts of most remains a mystery to this day.

John Sireson's testimony to a battle on February 26th 1947 between American aircraft and UFOs is transcribed here:

“They flew vertically out of the water. The two corsair from the Casablanca were slain by some mysterious ray like a satanic beast spitting deadly fire. The destroyer Murdoch was hit by some sort of ray of light and just as suddenly it was sunk. We took heavy losses then the saucers dove back underwater”

Die Glocke

Hitler and chosen members of his beloved Third Reich were obsessed with the occult. They attracted members of secret

societies such as the Thule Society and its inner circle, the Vril Society. For centuries members of occult organisations throughout the planet had sought immortality, power over the Underworld and the ability to travel anywhere in time and space. As well as creating an underground base at Neu Swabenland, Antarctica and fashioning antigravity stealth flying saucers the Nazi scientists were engaged in creating a time machine. They named it the Bell (Die Glocke). Employing the knowledge of Nikola Tesla Nazi scientists were in the process of perfecting Time Travel at the demise of the Second World War. Nikola Tesla gave the world alternating current (superceding the inferior direct current of the famous Thomas Edison).

In 1882 Tesla discovered rotating magnetic current. He proceeded to link the AC with magnetic current. He harnessed the power of Niagra Falls by producing the world's first Hydro Electric plant and was a Pioneer of x-rays. Financially supported by J. Pierpont

Morgan Tesla built the Wardenclyffe laboratory and its famous transmitting tower in Shoreham, Long Island between 1901 and 1905.

This huge landmark was 187 feet high, capped by a 68-foot copper dome which housed the magnifying transmitter. It was planned to be the first broadcast system, transmitting both signals and power without wires to any point on the globe. The huge magnifying transmitter, discharging high frequency electricity, would turn the earth into a gigantic dynamo which would project its electricity in unlimited amounts anywhere in the world. Tesla's concept of wireless electricity was used to power ocean liners, destroy warships, run industry and transportation and send communications instantaneously all over the globe. To stimulate the public's imagination, Tesla suggested that this wireless power could even be used for interplanetary communication.

Members of the Vril organisation had papers belonging to Tesla that both intimated the possibility of eternal regeneration (frequent immersion in a special electrical force field) and the prospect of communication across space and time. Did the Nazi scientists complete their work or did they send their 'bell' into the future to escape the prying eyes of invading American troops.

Almost 1000 top scientists were unaccounted for after the Second World War ended. Many of these may have fled to Antarctica, to work underground in New Berlin, Neu Swabenland. In Operation Paperclip the Americans swooped on Germany to offer top scientists posts in the USA. Some of these scientists must have worked on the Die Glocke Project.

Using the Bell to scry into the future they were able to reveal where they would be posted in the year 1965. In that same year a strange bell-shaped object appeared in the skies of Pennsylvania, precisely where the scientists knew they had sent it. On the ground the same

scientists were waiting for the return of their Project.

The story becomes even more macabre from now on. Civilians witnessed the 'UFO' spiralling slowly down to the ground where it landed safely. Those who attempted to investigate were swiftly despatched by members of the military (who wore no recognisable insignia). A flatbed truck removed Die Glocke. Witnesses were threatened with death should they discuss the situation.

Grandfather Principle

Should a person (call him Joe) discover a way to travel backwards through time then he would surely be able to travel back to a time before he was born. Let us say he visits a time period during which his grandfather and grandmother are 'courting'. His grandmother spurns his grandfather in favour of Joe then marries Joe. Crazy but possible if travelling backwards in time is also possible.

More seriously major world events (such as the outbreak of World War One or the sinking of the Titanic) could easily be averted – John Kennedy could be alive today. This of course means that the future would be irrevocably affected to present an entirely different future (one we are not familiar with). Events that happen to trigger other events are termed the Butterfly Effect as these effects sweep around the world. This brings into effect something known as the Collective Consciousness which I strongly recommend you research.

So time travel to the past is thought to be impossible simply because the present is fixed - we cannot change the past or we would be continuously changing the present. This of course assumes that the present is fixed and immutable. This does not presuppose that the future cannot be altered so for many years now scientists have been looking for ways to peep into our future.

Andrew Basiago says he was involved in experiments to peep into the future and more alarmingly he states that he (along with many other children) has visited the past.

Our brains are hard-wired to think of time as being linear. What if our brains are wrong? After all it is possible to enter a DVD at any position, play, repeat, replay and even to add more data to the DVD. Should our 'reality' be like a DVD then we must be able to travel forwards, backwards and even sideways in time, theoretically being able to create an infinite number of possible pasts, presents and futures.

Stargate at UR

The 2003 invasion of Iraq was a ploy to seize control of its rich oil supplies. In fact the oilfields have been sold off by the U.S. to the highest bidders at the cost of millions of lives. Yet there was an

even more sinister reason for invading the Arabian Gulf, site of our most ancient civilisation - Sumeria. There was a pressing need to occupy the now isolated ancient city of UR, to capture the stargate Saddam Hussein bragged about before he discovered how to employ this ancient technology. Just like the film of the same name Saddam's scientists were hell bent on trying to unravel the secret of travelling through spacetime.

Whilst the major U.S. forces were heavily bombing Baghdad and Basra an elite force captured the Zigarrat at UR. Here lay the REAL weapon of mass destruction. A stargate to any point in spacetime could literally give its owner control of the world, perhaps the Universe. Control of a unique weapon such as a time travel device would provide the U.S. Military with mastery of the world.

Task Force 20 was despatched to occupy the National Museum in Baghdad to prevent vitally important information being stolen from the Museum. Among this vital information was thought to be clues to the use of Saddam's stargate.

An airbase was established at UR and the U.S. forces remained at this city for ten years.

Conjecture places this stargate under ground in a military

establishment known as area 52.

In the following videos suggestion is made of other ancient stargates used by the 'gods' to transport themselves and goods to and from our planet. One such lies in a cliff at Puno near Lake Titicaca in Peru. Another in Bolivia is termed the Gateway of the Sun.

Andrew Basiago was a child Time Traveller. Later we will investigate this man and a colleague of his – Bernard Mendez. Both are alive, both claim to have taken part in time travel experiments operated by the U.S. Military between two 'portals' based near New York and in California. These experiments were an advanced version of Tesla's ideas using initially Die Glocke (the Nazi Bell). However, by the late 1960s the Bell had been replaced with a chamber then later by an 'elevator'. A torsion field was created around the chamber that would actually alter not only the coordinates of space but also the 'coordinates' of time. Howard

Hughes and even Barack Obama were said to be involved in these experiments that even promoted travel to Mars. But first:

Philadelphia Experiment catapulted sailor to 2749

Almost everyone has heard of the disappearing warship USS Eldridge at the Philadelphia naval yard in 1943 whereby a powerful magnetic field surrounded the ship.

There were terrible casualties and several sailors disappeared forever. Some seamen were said to be fused with the metal of the ship, others were on fire. Yet the experiment was denied by the U.S. Navy and leading scientists said to have designed this experiment in teleportation denied being present that day. One of these scientists was Albert Einstein.

Among the skeleton crew of the USS Eldridge that day were two brothers named Cameron. They were paramount in initiating the experiment. Upon instruction they threw a switch which instantly caused an intense magnetic field to surround the ship. Witnesses in the naval yard reported a green fog surrounding the ship. Then within minutes the ship shimmered and disappeared. The experiment to create an invisible warship was a success.

In the naval shipyard at Norfolk, Virginia the USS Eldridge began to materialise (a succesful experiment in teleportation over 270 miles). Back in Philadelphia for twenty minutes nothing could be seen then out of the green fog the ship reappeared. Fires had broken out onboard and the entire crew had officially ‘gone mad’. Some bodies were fused with the metal of the ship, many were retching or reeling about the deck in a daze.

Survivors were released from the navy – those who wanted to expose the terrible things that had happened were deemed insane. Sailors who died that day were listed as lost in action in the Atlantic Ocean. Others simply disappeared – they were also ‘officially dead’. Among those considered to have died ‘in the Atlantic’ was switch room operator Ed Cameron. Ed apparently lived to tell his amazing tale after he returned from the year 2749.

The Amazing Story of Ed Cameron

Ed Cameron (seaman aboard the ill-fated USS Eldridge in 1943) claims to have been catapulted into the year 2137 then on to the year 2749. He describes cities floating in the sky and 'computers' of a crystalline structure linked to humans by telepathy. In effect the 'crystal computers' manage society in our distant future.

Humans have no need to but often choose to work. Education is considered most important. War is a thing of the past but weaponry is maintained. High speed rail networks exist connecting the entire planet. Entertainment is at an all time high. However, there is little incentive to create or invent or progress as the system is entirely socialist in nature. The population is maintained at a maximum of half a billion. There is no recognised religion.

Here Ed has ceased to exist and is known now to the world by the name Al Bielek. This entire story seems to be incredibly far-fetched. Please research and come to your own conclusions.

John Titor

Is John a true time traveller? John Titor allegedly came back to us from 2036 to let us know that scientists are developing time travel in Switzerland at CERN – by opening up their very own black hole. John claims the world is not a pleasant place in 2036. He stated that he was sent back in time to rectify the strong possibility of a third world war. Impressive or a massive hoax? Judge for yourself. Titor did mention CERN and the specialised black hole they created. Did I mention this earlier? So we come full circle. Perhaps many adventures through time are indeed cyclical with two points in time forming a loop to determine the outcome of both important periods. Anything is possible, anything can be achieved IN TIME.

In the twentieth century the subject of time travel was a scientific taboo yet some scientists were secretly trying to discover their own methods of travelling through time. By the end of the century it

had been proven mathematically that it is certainly theoretically possible to travel into the future. Travel to the past was thought to be impossible due to the grandfather principle.

Returning to the black hole possibility of travelling through time by warping spacetime itself. Mathematically this is absolutely possible. Time travel is achieved by bending the space time continuum. At CERN this is becoming absolutely probable. John Titor says it absolutely is happening. Of course it was only a matter of time.

According to the video above two cosmic strings bend spacetime thus allowing a 'shortcut' across spacetime effectively allowing a particle to reach a predetermined point in spacetime before light reaches it and being able to travel back to its original point before it left that point.

Cosmic strings may be found in special black holes and it is this special black hole that scientists are attempting to create at CERN in the LHC.

First we travelled greater than 30 mph, then we took to the air, then

personally communicated across the planet and even to the moon.

Now we can travel instantly anywhere anytime. It is conceivable to return to a point in time before leaving it.

Scientists actually discuss the validity of time travel, the same scientists who are drooling at the mouth over the LHC.

Operation Pegasus

Following the rediscovery of Die Glocke in 1965 German and American scientists (funded by the CIA) worked to perfect a time travel chamber. German scientists were able to peer into the future using a mirror-like apparatus attached to the Bell but had insufficient time during World War Two to begin experimentation with time travel itself. They now had all the time and all the resources they needed.

In the following video a radio talk show host talks to people who have partaken in time travel experiments. They call it jumping. The experimentation was codenamed Operation Pegasus.

Here a number of individuals claim to have partaken in time travel experiments beginning in the 1960s. I shall introduce you to these individuals and relate their experiences.

Time Travelling Children

The American lawyer Andrew Basiago lectures on his childhood experiences where he says he took part in time travel experiments guided by his father. Andrew's father was Raymond F Basiago (Engineer for Curits-Wright Aviation at Woodridge in the 1950s to 1970s).

He was asked to volunteer his son for time travel experiments.

Andrew was one of dozens of children placed into a specially prepared capsule to partake in travels through time.

Andrew states with conviction that from the year 1967 he was periodically transported from one locale to another both on and off our planet both backwards and forwards in time.

We already live on Mars

Andrew Basiago claims to have been transported to Mars where he visited a colony the U.S. Military are establishing there. On the first occasion he was only four years old. Prior to the 'jump' to Mars his father Raymond read from a Manilla file issued by the CIA which purported to be from the year 2008 written by no other than Andrew himself – over 40 years in the future. Later his father would show him a photograph of a Martian.

Teleportation would generally occur from building 68 of the Curtis-Wright Aeronautical Facility in Woodridge New Jersey to Los Alamos, New Mexico. The 'journey' would generally take approximately thirty seconds.

On a special occasion in 1970 Andrew was taken to a remote hanger where he witnessed a tear drop shaped space craft and was introduced to the pilot and crew who had flown from Mars. The

beings were essentially human but with highly pitched voices. The major difference between Martians and humans is the domed forehead.

These 'spacemen' wore a red spacesuit emblazoned with a yellow lightning bolt on the chest. At this meeting there was an agreement for the Martians to share their advanced aeronautical technology.

In 1971 on Halloween night Andrew was sick in bed. His father entered Andrew's bedroom then presented Andrew with a paper entitled 'Life on Mars'. The paper was written by Andrew himself in the year 2009.

In 1972 Andrew's family moved to California. From 1980 Andrew studied at UCLA. He was assigned a mentor - Courtney M Hunt - who attempted to recruit Andrew into the CIA.

Andrew 'jumped' through the stargate at the Convention Centre in Santa Fe to the year 2045. He brought back to the radio microwave tower in South West Colorado microfilmed canisters. The film provided details of world events that would enable the Defence Department of the USA in present time to prepare for certain disasters that would occur in the foreseeable future.

Andrew states that Donald Rumsfeld was attached to Project Pegasus. He was in a senior position and was one of the officials who wished the children engaged in PP to continue to time travel during adulthood, despite there being danger to the individuals.

DARPA had five reasons for involving American school children in such dangerous experiments.

- The DoD wished to test mental and physical effects of teleportation on children

- Project Pegasus required school children as the holograms created by chronovisors collapsed when adults entered them
- Children see more than adults, primarily due to better eyesight and curiosity
- Training youngsters meant they were still available for many years
- They were to be employed in a Black Ops time/space off planet programme

Andrew Basiago talks of his father participating in the development of jet engines in an attempt to capture UFOs.

In 1981 Andrew Basiago teleported to Mars

Courtney Hunt drove Andrew to an office building. They rose in an elevator to the fifth floor. Courtney left the elevator and before Andrew could join him the entire elevator teleported to a concrete bunker beneath the surface of Mars. Andrew states that

he rose up two flights of stairs to find himself behind the eye socket of a giant statue. By walking through the eye socket he found himself on the surface of Mars.

He describes the atmosphere on Mars as breathable but heavy in the same way as Los Angeles is on a smoggy day. When Andrew turned to face the statue it was that of a giant skull. There were humans and Martians talking together. A hybrid human was shackled by a rudimentary hut. The lower half of the creature resembled a shapeless sleeping bag. There were hands but no legs.

In the hut lived a man. This person had been on Mars for so long he had become mentally deranged. Upon the return to the skull statue Andrew and his handler spotted a Martian predator that he claimed almost killed him as he was diving to the safety of the eye socket of the skull. Since this incident Andrew claims humans have been eaten by carnivorous predators. For this reason the colony on Mars is based underground. New age

lecturer David Willcock agrees with Andrew that there are approximately 60000 people now living underground on Mars. Both Andrew and David confirm that Martians and humans have a common ancestry. Andrew has published papers on his visits to Mars. See photo above.

William Brett Stillings testifies to the validity of Andrew's claims that there is life on Mars. They both agree that the CIA have deliberately leaked information to Basiago so that he will go public with this amazing information. The CIA actually want to prepare people of our planet to become accustomed to this incredible information.

Bernie Mendez was present during negotiations with E.T.s who consider humans to be 'contaminated'. They have warned us not to entertain the thought of occupying the moon or other planets.

Obama was a time traveller?

Basiago reveals that President Barack Obama (who was known to him as Barry Soetoro at the time) was his classmate in a Mars training program held at the College of the Siskiyous in 1980.

Other classmates were Regina E. Dugan who Obama had appointed Director of Defense Advanced Research Projects Agency (DARPA) in 2009, William C. McCool who was piloting the Space Shuttle Columbia when it disintegrated, and William Brett Stillings. Stillings says he also traveled to Mars and saw Obama on the planet. Stillings and Basiago say that the class was taught by Major Ed Dames who was a Captain at that time.

According to Mr. Basiago and Mr. Stillings, in Summer 1980 they attended a three-week factual seminar about Mars to prepare them for trips that were then later taken to Mars via teleportation. The course was taught by remote viewing pioneer Major Ed Dames, who was then serving as a scientific and technical intelligence

officer for the U.S. Army. It was held at the College of the Siskiyous, a small college near Mt. Shasta in California.

They state that ten teenagers were enrolled in the Mars training program. In addition to Basiago and Stillings, two of the eight other teenagers in Major Dames' class that they can identify today were Barack Obama, who was then using the name "Barry Soetoro," and Regina Dugan. Mr. Obama appointed Dugan as the 19th director and first female director of the Defense Advanced Research Projects Agency (DARPA) in 2009.

As many as seven parents of the ten students, all with ties to the CIA, audited the class. They included Raymond F. Basiago, an engineer for The Ralph M Parsons Co. He was the chief technical liaison between Parsons and the CIA on Tesla-based teleportation; Thomas Stillings, an operations analyst for the Lockheed Corporation who had served with the Office of Naval Intelligence;

and Mr. Obama's mother, Stanley Ann Dunham, who carried out assignments for the CIA in Kenya and Indonesia.

From 1981 to 1983, the young attendees then went on to teleport to Mars via a "jump room" located in a building occupied by Hughes Aircraft at 999 N. Sepulveda Boulevard in El Segundo, California, adjacent to the Los Angeles International Airport (LAX).

Quote from:

<http://exopolitics.blogspot.com/2011/11/mars-visitors-basiago-and-stillings-confirm-barack-obama-traveled-to-mars-1.html>

Basiago, Obama, Stillings, and Dugan went to Mars at a time when the U.S. presence on Mars was only just beginning but many had already gone.

Mr. Basiago states that in the early 1980's, when they went, the U.S. facilities on Mars were rudimentary and resembled the construction phase of a rural mining project. While there was some infrastructure supporting the jump rooms on Mars, there were no base-like buildings like the U.S. base on Mars first revealed publicly by Command Sergeant Major Robert Dean at the European Exopolitics Summit in Barcelona, Spain in 2009.

The primitive conditions that they encountered on Mars might explain the high level of danger involved. Mr. Basiago and Mr. Stillings agree that Major Dames stated during their training class at The College of the Siskiyous in 1980: "Of the 97,000 individuals that we have thus far sent to Mars, only 7,000 have survived there after five years."

In light of these risks and prior to going to Mars Mr. Basiago

received additional training from Mr. Hunt. Hunt took Andrew to the Lockheed facility in Burbank, California for training in the avoidance of predators living on the surface of Mars.

Hunt (CIA officer) showed Mr. Basiago how to operate the respiration device that he would wear only during his first jump to Mars in July 1981. This provided him with a weapon to protect himself on Mars.

When they first teleported to Mars in Summer 1981 they confronted the situation that Major Dames had covered at length during the class the previous summer – one of their principal concerns on Mars would be to avoid being devoured by one of the predator species on the Martian surface.

The Mars program was launched, Basiago and Stillings were told, to establish a defense regime protecting the Earth from threats

from space and, by sending civilians, to establish a legal basis for the U.S. to assert a claim of territorial sovereignty over Mars.

In furtherance of these goals and the expectation that human beings from Earth would begin visiting Mars in greater numbers, their mission was to acclimate Martian humanoids and animals to their presence or, as Major Dames stated during their training near Mt. Shasta in 1980: “Simply put, your task is to be seen and not eaten.”

Andrew Basiago also claims he was despatched back in time to the Gettysburg address. He presents a photograph where he states he is standing in the foreground.

Chronovision

Basiago describes an elaborate method of peering into the future and reclaiming images of the past. He says Chronovision was able to “capture the residual signals of a past events and the insipient signals of a future events” which would then be amplified to create a holographic image. Basiago says this technology was initially

stumbled upon by Father Pellegrino Ernetti and Father Agostino Gemelli of the Vatican in the late 1940's and early 50's.

They were attempting to separate and study the different frequencies present in Gregorian chants. This was transferred to the U.S. government in the early 1950's for further development by Italian physicist Enrico Fermi.

Father Ernetti said "Every individual from birth to death traces an arc in the quantum hologram of light and sound. Everything that has happened is happening now or will happen & is stored somewhere in the quantum hologram. The challenge is to find it and capture the signal of it and amplify it."

Other individuals who confirm life on Mars and the existence of time travel devices include:

Milton William Cooper radio host and conspiracy theorist, Laura Eisenhower great granddaughter of the President and Al Bielek who claims to be Ed Cameron survivor of the Philadelphia experiment and time traveller to the year 2045.

William Brett Stillings confirms Andrew Basiago's claims including meeting Barack Obama in class and on Mars. His first teleportation experience was in 1979. He acknowledges that Martians were frequently returning with him to our planet throughout the 1980s. He claims to have taken part in psy ops experiments.

As I stated before I make no comment for the validity of the statements of those persons I have introduced you to in this treatise.

Time travel he says is not only conceivable but a reality (provided we can reach the requisite speed).

Scientists agree that time is experienced in different ways and at different rates. Light speed is uniform but time travels more slowly the faster a 'body' is travelling. This is known as time dilation. At CERN it is the Muon (life span one millionth of a second) that is accelerated to a velocity approaching light speed.

This essentially increases the life span of the Muon. The Muon has passed into our future. Large bodies such as stars (and especially black holes) actually bend spacetime. Because of this fact satellites must correct their GPS settings daily.

Black holes slow time substantially and scientists believe that by entering a black hole one would be able to travel backwards in time. They also believe the immense gravity of the black hole will crush anything inside it – even light. They are therefore attempting to create a ‘safe’ black hole in Geneva.

Cosmic Strings

Cosmic strings are naturally occurring time machines.

Cosmic strings are thin threads of energy that are hugely dense.

The tiniest string is able to warp time. If two infinite strings passed each other they effectively create a time machine by warping light eccentrically.

Cosmic Strings are hypothetically a 1-dimensional (spatially) topological defect in the fabric of spacetime left over from the formation of the universe. Interaction will create fields of closed time-like curves permitting backwards time travel.

Some scientists have suggested using "cosmic strings" to construct a time machine. By manoeuvring two cosmic strings close together – or possibly just one string plus a black hole – it is theoretically possible to create a whole array of "closed time-like

curves." Cause two infinitely long cosmic strings to pass each other at very high speeds. Now if a spaceship should fly in a figure of eight around them it will be able to travel anywhere in the Universe.

A black hole contains a one-dimensional singularity (infinitely small point in the space-time continuum).

A cosmic string would be a two-dimensional infinitely thin line that has even stranger effects on the fabric of space and time.

Although no one has discovered a cosmic string astrophysicists have suggested that these strings may explain strange effects seen in distant galaxies.

The phase changes that produce cosmic strings may have occurred in the earliest moments of the universe's evolution.

The key characteristics of the application of cosmic strings for time control and time travel are presented in the picture below.

Cosmic Strings

- Effect: GENERAL RELATIVISTIC
- Speed: SUBLUMINAL
- Special Spacetime Geometry: YES
-  Time Travel to Future: YES
-  Time Travel to Past: YES
-  Matter Transport: YES
-  Information Transport: YES
-  Technically Viable: NO
-  Possible w/o Exotic Materials: YES
-  Low Input Power: YES

Time Control Technologies and Methods

Innovation and Excellence in Time Technology

A cosmic string 1.6 kilometers in length may be heavier than the Earth. However general relativity predicts that the gravitational potential of a straight string vanishes - there is no gravitational force on static surrounding matter.

The only gravitational effect of a straight cosmic string is a relative deflection of matter (or light) passing the string on opposite sides (a purely topological effect). A closed loop of cosmic string gravitates in a more conventional way. During the expansion of the universe, cosmic strings would form a network of loops, and their gravity could have been responsible for the original clumping of matter into galactic superclusters.

A cosmic string oscillates at near the speed of light. This causes part of the string to pinch off into an isolated loop. Such loops have a finite lifespan due to decay via gravitational radiation.

On Earth a tunnel will be the shortest distance either through a mountain or through the Earth itself. In spacetime the shortest distance is through a wormhole:

Teleportation and Levitation

It is now widely accepted amongst mainstream science and archaeology that the Egyptians could not possibly have erected the pyramids using slave labour alone. In fact as we Google Earth our way around the planet pyramids and ziggurats pop up on almost every Continent.

So how were all the major ancient sites constructed (please research the fantastic statues and cities almost forgotten in South East Asia – places such as Cambodia)?

The current theory involves both levitation and teleportation.

Levitation is the raising of an object (often through the power of the mind) which ordinarily would not be possible by such means (eg a pen with sheer will) or is too darned heavy to ascend with even the most powerful pieces of kit. Take for example the site at Baalbek in Lebanon:

This site was first mentioned in the Epic of Gilgamesh (if you don't know what this is read my extremely large book entitled **Arrival of the Anunnaki** by Gary G Margrove).

The smallest foundation Stones at Baalbek weigh over 25 tons each.

No machine on Earth is able to lift or carry even one of these stones let alone transport the entire (some say space craft landing site) a distance of 25 miles from the quarry from which they occurred naturally. So perhaps levitation or even teleportation is the only possible solution. What is teleportation? Perhaps you have seen old episodes of Star Trek?

Teleportation is a 'hypothetical' mode of instantaneous transportation; matter is dematerialized at one place and recreated at another. Andrew Basiago will tell you it is not hypothetical.

Teleportation's As Easy As 1-2-3!

Over five years ago, scientists succeeded in teleporting information. Unfortunately, the advance failed to bring us any closer to the Star Trek future we all dream of. Now, researchers in Japan have used the same principles to prove that energy can be teleported in the same fashion as information. Rather than just hastening the dawn of quantum computing, this development

could lead to practical, significant changes in energy distribution.

According to the theory, developed by Masahiro Hotta of Tohoku University, Japan, a series of entangled particles could be stretched across an infinite amount of space. By inducing an energy change in one of the particles, the other entangled particles would change as well. Eventually, to preserve conservation of energy, the original particle would be destroyed, with its energy passing to the final particle in the chain. Thus, the energy has been teleported from one particle to another. Just like Star Trek. Our bodies are after all a form of energy.

In 1995 a group of scientists from the J. Craig Venter Institute, JCVI, launched a project “minimal genome“, whose goal was to leave in the genetic code only the essential information for the existence of a living organism. The research was based on the bacterium *Mycoplasma genitalium*, which at that time had the smallest genome of all known (482 genes). In 1999, Venter reduced the number of genes to 382, creating a “semi-synthetic”

Mycoplasma laboratorium.

In 2003, together with colleagues from JCVI he announced to have managed to transform one type of bacteria (*M. capricolum*) to another (*M. mycoides*) using genome transplant, and in 2008 an organism with a fully synthetic genome was created after a second attempt.

Last year, Craig Venter published a new book *Life at the Speed of Light: From the Double Helix to the Dawn of Digital Life*, in which not only he describes the history of synthetic biology but also a completely new concept of “biological teleportation”.

Venter argues that the information contained in the DNA can be digitized and transmitted over cable or via electromagnetic waves, and on the other end a special machine would synthesize oligonucleotides (short DNA fragments) and a robot

would assemble the DNA completely identical to the original.

Such a “teleportation” promises significant savings of resources: in fact, to transmit information about the status of all the atoms in the human body about 10^{32} bits are required, but for the transmission of digitized human genome – only 6×10^9 bits.

Technology that Venter writes about is not fiction – the company Synthetic Genomics, founded by Venter and his colleague Hamilton Smith, has been working on reading and assembling the DNA. But, of course, teleportation of a person in this manner cannot take place either now or in the near future. But to transmit information about the strain of a new virus from one laboratory to another and quickly create a vaccine to prevent pandemic can be possible now.

In 2011, Synthetic Genomics in collaboration with the pharmaceutical company Novartis demonstrated an “assembly” of

a vaccine based on the envelope proteins of avian influenza virus H7N9 (later the method was repeated for other strains) in less than five days (usually a similar vaccine production requires about two months). Moreover, such method can allow to build specialized bacteriophages which can be an excellent alternative to the use of antibiotics.

However, Venter claims that these methods can be used not only on our planet. Why not to use “biological teleportation” to detect life on Mars? Equipping rover with a biological laboratory, it is possible to transfer information about the found genomes to Earth, where they can be recreated and studied. And maybe someday the process will be reversed: the colonists will be able to receive the necessary bacteria and plants from Earth.

Who thought that the 3-D printer would become a reality?

Quantum Teleportation

What is teleportation? Here is an example. Lab A and Lab B each have a box. Teleportation should transport any object that is placed in Box A and move it to Box B.

Of special interest to science fiction fans (among others) is human teleportation, where a brave telenaut (whom we shall call Jim) enters Box A and uses the teleportation machine to travel to Lab B. It turns out that human teleportation appears possible in principle.

Teleportation of much smaller objects is not only possible but has been accomplished in the laboratory. Our goal here is to explain how teleportation is achieved.

Classical teleportation

Load the cargo of box A onto a truck, drive the truck over to lab B then unload the cargo into box B. Of course this is transportation not teleportation.

A giant 3-D fax machine could in theory reproduce a human being.

Assuming the appropriate matter and energy is available in Lab B.
The aim is to assemble it such that it is identical to the object
placed in Box A.

There are so many drawbacks to this method not least that there
would be two identical humans then three and so on.

Quantum teleportation

The surprising result of quantum teleportation is that even though the "measure and reconstruct" procedure does not work, there is an alternative procedure that effectively validates teleportation in the quantum world.

Not until the publication of a 1993 paper by Bennett, Brassard, Crepeau, Jozsa, Peres and Wootters that scientists realized quantum teleportation was possible.

An entangled state is a pair of objects that are correlated in a quantum way. Below we will describe a specific example known as the "singlet state" of two spins. However, let us first explore the consequences of this extra requirement for quantum teleportation.

To prepare an entangled state of two particles, one essentially has to begin with both particles in the same laboratory. Begin in Lab A.

In practice sending this particle to Lab B will destroy one entangled state to create another entangled state.

The only solution is that in the past the wall that separates Lab A and Lab B was non-existent. At that time scientists from the two labs colluded, created a large number of entangled states, then carried them to their respective laboratories.

The entanglement requirement poses a second problem since it is destroyed when used.

Entanglement is effectively a resource that is slowly depleted as teleportations occur. It can be renewed by meeting in person and

then carrying entanglement back from Lab A to Lab B but it has to be transported without the use of teleportation. In principle this is difficult, otherwise we wouldn't have bothered using teleportation from A to B in the first place. However, the idea is that one difficult journey from A to B will allow in future many quick transfers from A to B.

Quantum information cannot be copied. The only way to teleport an object to Lab B is to destroy the object at Lab A.

At first glance, though, there seems to be a way to use the teleportation procedure for superluminal communication. That is, by measuring the spins in Lab A, we are instantaneously modifying the spin in Lab B.

Real experiments that perform teleportation

A number of groups conducted experimental realizations of the quantum teleportation procedure described above in the years 1997 and 1998, using a variety of different systems such as the spin (or polarization) of photons and the spin of atoms. In many cases Labs A and B were the left and right side of a table, and the spins were teleported roughly 50 cm.

The reason distance becomes relevant has to do with the distribution of entanglement which becomes harder as the separation between the two "labs" increases. A second related problem is the storing of entanglement which can only be done for very short periods, so in practice most early experiments distribute the entanglement only moments before it is to be used for teleportation. However, these experiments were sufficient to convince most physicists that teleportation of spins is possible.

Since 1997 there have also been many improved versions of the teleportation experiment. For instance, the distance has been increased in one experiment to 600 m, and the accuracy of the teleported state has also been slowly improving.

In principle, if you can teleport one spin, then you can teleport many spins simply by repeating the experiment in series many times. But this roughly only works on disjoint spins.

To teleport a single object comprised of many spins is still out of reach of present day experiments.

In the future, though, we should see experiments that teleport large numbers of spins.

Certainly, if a practical quantum computer is ever built then the

same technology would likely allow us to teleport a few thousand spins. It is likely that this will happen within the next 30--50 years, if not sooner.

But will we ever be able to teleport people?

There are some 10^{29} matter particles comprising a human person, each of which has position and momentum degrees of freedom in addition to spin. In principle, we might also need to teleport the photons, gluons and other energy particles comprising a person.

While most scientists expect that ten, hundreds and maybe even thousands of spins will be teleported in practice some day, the teleportation of a human being, even in principle, is actually still a controversial subject.

In the meantime, one can ask if there any applications for teleporting thousands of spins?

In the future it is likely that quantum computers (i.e., computers capable of processing quantum information) will be built. These

computers will need to exchange quantum information. One way these exchanges of information can occur is via a quantum phone (a device capable of sending and received quantum messages).

Some time within the next 100 years you will see a quantum teleportation device for sale in your local computer store.

Scientists at the world's largest Hadron Collider are attempting to create a wormhole.

Professor Ron Mallett believes we are on the verge of travelling through time. He thinks that the artificial circular motion of light will be used to control gravity which in turn controls time.

To incorporate the possibility of time travel to the past many scientists adopt the hypothesis that there are an infinite number of possible pasts and futures and therefore an infinite number of universes.

Should we be granted the ability to travel back into the past then we would surely remedy any unfortunate circumstances such as the assassination of President John F Kennedy. Of course this would depend entirely on those in control of the time travel device. There is just one snag: Precisely the same people who had Kennedy assassinated are in control of the USA nowadays. They work for the Illuminati and work towards a New World Order (for

full details read my treatise on New World Order). In effect ownership of a time travel device gives that corporation ownership of the world, perhaps the Universe. A sobering thought.

NAMASTE

Gary Margrove has written over 100 books. For full knowledge of the truth of human history, religion and time travel, what will happen to us in future and the evil cabal that have enslaved mankind read them all. Also available the shocking facts regarding human genetic engineering entitled **Arrival of the Anunnaki** by Gary G Margrove. This treatise provides you with a true account of the creation of the human race.
